

Perimeter Treatments

Perimeter Treatments

Kwik Kill Exterminators will apply a long lasting residual insecticide to the exterior of your home. Kwik Kill Exterminators can also apply a long lasting residual insecticide to your yard - the formulas we use for boundary treatments are safe and used in playgrounds.

Entry Point Treatments

A premium residual insecticide is applied concentrating on the entry points for insects into your home.

Roaches and Other Insects

After inspecting and analyzing your situation, Kwik Kill Exterminators will advise you on household routines that will minimize infestation. In addition, our specialists offer treatments that may include the following:

- Crack and Crevice Pesticide Placement - Chemical materials are placed carefully only in areas where the insects live and breed such as dark, enclosed areas within walls and under cabinets. Our process assures that will be minimal exposure to children, food, or pets.
- Direct Contact - Chemicals are directly applied to the pests
- Insect Growth Regulators - These chemicals duplicate the insect's natural hormones to disrupt their natural growth and development.

Rodent Control

After a thorough inspection to determine which species we're dealing with, Kwik Kill Exterminators will create an effective program to keep your home rodent-free.

Ongoing Maintenance

Season after season, your home will be exposed to different types of pests -- roaches, ants, spiders, birds, and rodents will all be trying to make a home in yours. To make sure the pests you've so carefully controlled don't return, you can contact Kwik Kill Exterminators for continuing regular pest control services.
